

## Co-Sapien Space

We can create a more sustainable future by taking steps to implement practical **actions**. A future where we utilise the power of technology to **adapt** to a new reality.

We can solve environmental and climate issues by managing **living beings** and natural resources, from bees to flowers and trees. We will make these solutions a reality by investing in **human systems**, such as infrastructure, transport and digital enhancements.

Here are some projects that will interest you based on your answers.

### LandGriffon

Empowering companies to measure, manage, and sustainably transform agricultural supply chain impacts.

[Learn more](#)

### Marxan

Supporting collaboration and decision-making for biodiversity conservation and socio-economic objectives for land, freshwater and ocean systems.

[Learn more](#)

### CoCliCo

Improving decision-making on coastal risk management and adaptation to sea-level rise.
