

## Balanced Systems

We can create a more sustainable future by taking steps to implement practical **actions**. A future where we **prevent** severe climate and ecological breakdown by working with the earth rather than against her.

We can solve environmental and climate issues by managing the **elements** that regulate life, from soil to the sun. We will make these solutions a reality by investing in **human systems**, such as infrastructure, transport and digital enhancements.

Here are some projects that will interest you based on your answers.

### Trase

Providing a unique supply chain mapping approach that revolutionises our understanding of the trade and financing of deforestation-linked commodities.
