

Shared Land

We can create a more sustainable future by taking steps to build **knowledge** and track change. A future where we **prevent** severe climate and ecological breakdown by working with the earth rather than against her.

We can solve environmental and climate issues by managing **living beings** and natural resources, from bees to flowers and trees. We will make these solutions a reality by investing in **nature-based** initiatives.

Here are some projects that will interest you based on your answers.

Global Mangrove Watch

Monitoring near real time change to catalyse the action needed to protect and restore mangroves.
