

## Evolution Guidebook

We can create a more sustainable future by taking steps to build **knowledge** and track change. A future where we utilise the power of technology to **adapt** to a new reality.

We can solve environmental and climate issues by managing **living beings** and natural resources, from bees to flowers and trees. We will make these solutions a reality by investing in **human systems**, such as infrastructure, transport and digital enhancements.

Here are some projects that will interest you based on your answers.

### Ocean Watch

Providing trusted data for sustainable ocean management and development.
